

RemoteGP PC Configuration Tool Sample

Life Racing PDU Keypad

Description

These samples relate to the PDU Keypad by Life Racing. The keypad transmits buttons states via CAN which can be read by the RemoteGP for controlling your camera system.

Notes:

- A Command Frame must be sent to the keypad at least once per second. This is not sent by the RemoteGP and must be transmitted by the master ECU or PDU in the system.
- The CAN ID of the status frame differs depending on which firmware version your keypad is running. Version 2.1 is transmitted on 741h, and Version 2.2 is transmitted on 751h. Refer to your keypad user manual to determine which firmware version you have. Samples are provided for both firmware versions.
